- Developed scalable backend services and RESTful APIs using Java and Spring Boot with layered architecture.
- Integrated PostgreSQL using Hibernate/JPA and optimized SQL queries for performance.
- Implemented JWT and OAuth2 authentication; contributed to microservices architecture.
- Built React frontend components using functional components, Hooks, Redux Toolkit, and React Router.
- Integrated React frontend with backend APIs using Axios with interceptors and error handling.
- Leveraged ChatGPT, DeepSeek, Claude AI, and Perplexity for code assistance, debugging, and API integration support.
- Tested and documented APIs using Postman; managed source code with Git and Bitbucket.

Freelance Full-Stack Developer – Leading Regional Domestic Gas Distributor

Jan 2026 – Present

- Developing a product-based web application as an independent full-stack developer.
- Building Java & Spring Boot backend with RESTful APIs and a dynamic React frontend.
- Handling full-stack development independently – from system design to deployment.

PROJECT EXPERIENCE

AutoCare 360 (Full-Stack System) – *Java, Spring Boot, PostgreSQL, JPA, React.js, Redux*

- Developed backend ERP modules with REST APIs, PostgreSQL schema design, and JPA integration.
- Built React frontend with Redux Toolkit for state management and React Router for navigation.
- Followed layered architecture for scalable, maintainable design.

Asset Pro (Full-Stack Application) – *Java, Spring Boot, PostgreSQL, React.js, Axios*

- Built backend services for asset lifecycle management with validation, exception handling, and logging.
- Developed React dashboard with real-time data updates and Axios-based API integration.

Deepthigas Web App (Freelance Project) – *Java, Spring Boot, React.js*

- Developing a product-based web application with Java/Spring Boot backend and React frontend.
- Handling complete project lifecycle including architecture, development, and deployment.
